

# Transformational Cloud with Google

## WHY GOOGLE CLOUD

It's evident that migrating to and adopting cloud services is essential for companies to truly succeed, be competitive and stay relevant in the long term.

We see Google Cloud as a leading provider with solid growth in both business impact and customer engagement, providing high-end technology capabilities. GCP is especially strong in data analytics and security, with excellent integration with other Google services and a dedication to open-source standards.

We also appreciate the active collaboration between Google and us as partners to support current and potential new customers.

## WHAT WE DO

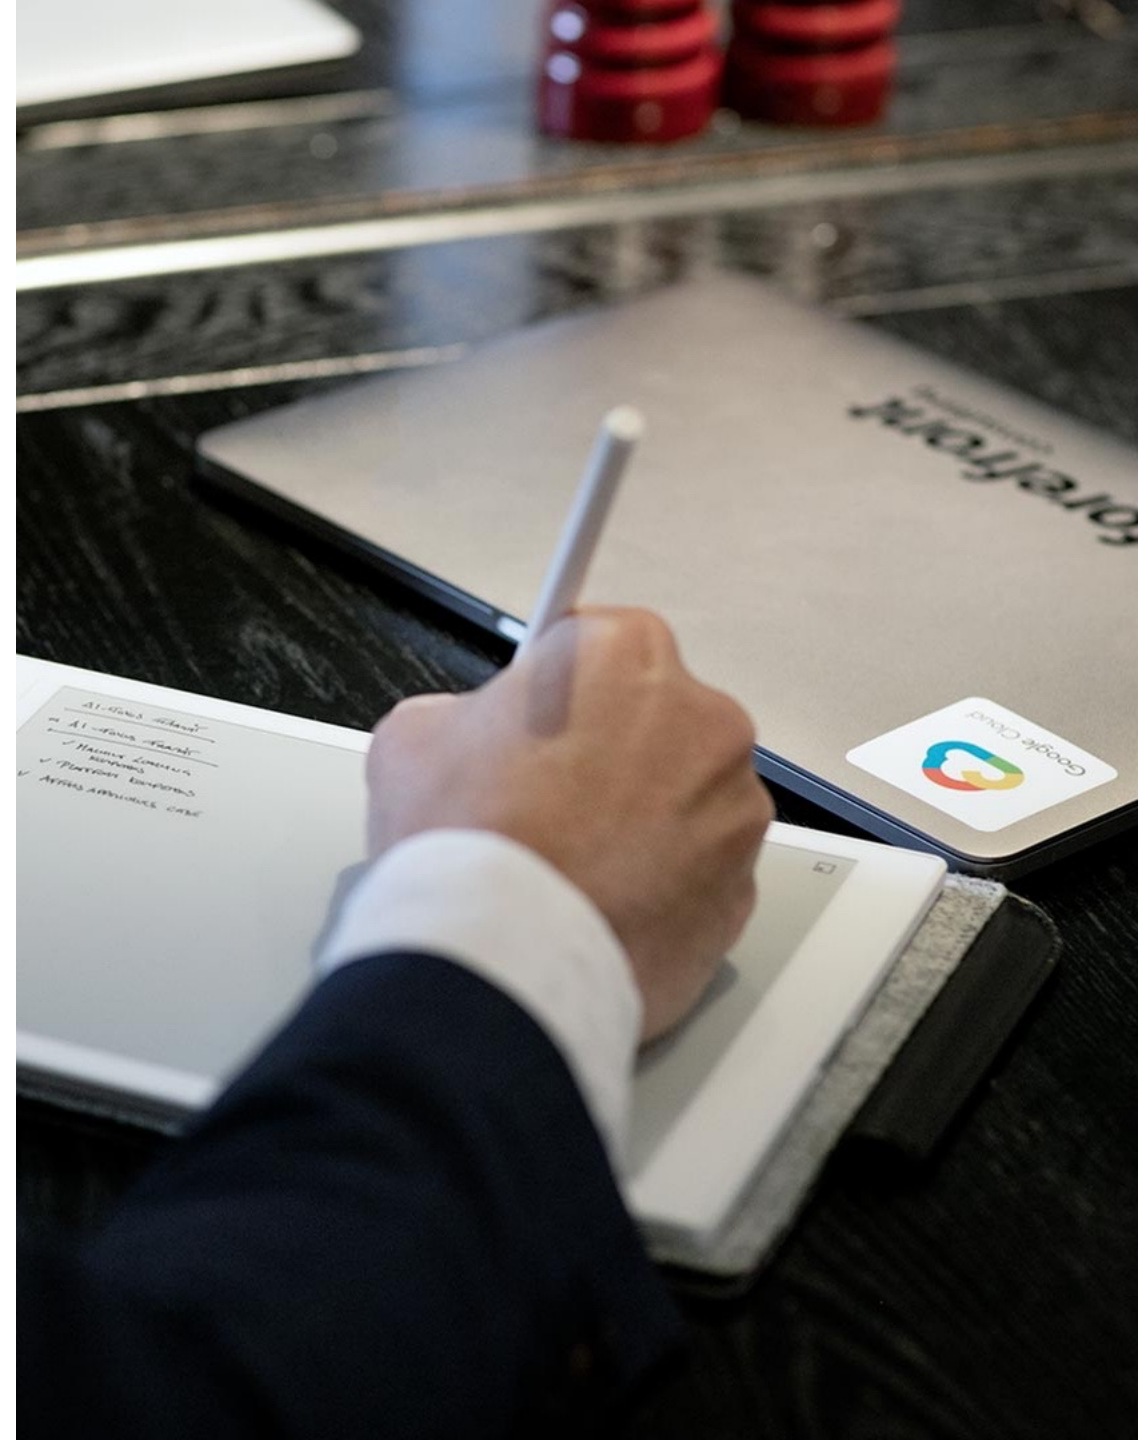

We started our partnership and investment in GCP at the beginning of 2019, focusing on Google Cloud Platform and Looker. Currently, we mainly operate and offer expertise in three complementary pillars:

- **Cloud Foundation Architecture & Security**
- **Data & Analytics**
- **Application Modernization & Development**

## HOW WE SUPPORT

Our mission is to support our customers to be successful and competitive by transforming their organizational capability by adopting forefront technology. Depending on your current situation, we adapt our support to provide as much value as possible.

We offer the ability to establish cloud strategy, cloud foundation (from minimal viable landing zones to operational grade) and workload implementations through team delivery or specific advisory roles. We see it as our role to elevate your knowledge of GCP and can offer customer-tailored training activities and act as long-term support as a reseller of GCP.

# Google Cloud Partner Transformation Support to our customers

Business Offerings	<b>CLOUD FOUNDATION ARCHITECTURE &amp; SECURITY</b>	<b>DATA &amp; ANALYTICS</b>	<b>APPLICATION MODERNIZATION &amp; DEVELOPMENT</b>
